-in the ui hero section a phrase in that form:

FIND A DOCTOR IN \${animation of available medecin domains}

example: www.doctolib.fr

example02: <https://www.beesiha.com/fr>

-ky trecharchy tekhrailak 2 divs flex row premier fih les docteur 2eme fih map
where the user searched with doctors location on it when the user clicks on
the location the selected doctor get in first position

example:

<https://www.doctolib.fr/medecin-generaliste/savigny-sur-seille-london>

-filter temp emails

-prix te3 rendez-vous form example : 2500-4500dzd

-when u search and there are no results you suggest to user that he can
search in other wilayas

-User registration and login: Allow users to create an account and login to the
application using their email address or social media credentials.

-Search and book appointments: Provide a search functionality that allows
users to search for doctors based on location, specialty, availability, ratings,
and other criteria. Once they find a suitable doctor, they should be able to
book an appointment.

-Maybe create a blog for better SEO example: <https://www.med.tn/>

-Appointment management: Allow users to view their upcoming
appointments, reschedule or cancel appointments if necessary.

-Doctor profiles: Provide detailed profiles for each doctor, including their
qualifications, experience, specialization, availability, and location.

-Ratings and reviews: Allow users to rate and review doctors after their
appointments, and display these ratings and reviews on the doctor's profile
page.

-Notifications: Send users reminders about their upcoming appointments, as well as notifications about any changes to their appointments.

-I liked the simple animated icons like in this website:

<https://www.maiia.com/>

-Location-based services: Provide maps and directions to help users find the doctor's office easily.

-Payment integration: Allow users to pay for appointments directly through the application.

-User support: Provide users with a way to contact customer support if they have any questions or issues with the application.
